

ASP Project Coversheet

Corrina Wynne, x12342071

The project is called "Book Manager" and allows users to view, update, add and delete records from a database containing information on several books. The project is viewable here:

<http://aspproject.azurewebsites.net/>.

The user may also create an account and login, the account details are then stored in the database also, but they are not viewable by users.

For the project I used Web Forms Scaffolding to allow users to edit the data on the site, as I was having issues with the code first approach.
